

# WORK, ENERGY & POWER

## IMPORTANT TERMS & DEFINITIONS

<p><b>The work done on an object by a constant force F</b></p> <p><math>W = F \Delta x \cos \theta</math></p>	<p>The work done on an object by a constant force F, where <math>F\Delta x \cos \theta</math>, F is the magnitude of the force, <math>\Delta x</math> the magnitude of the displacement and <math>\theta</math> the angle between the force and the displacement</p>
<p><b>Work-energy Theorem</b></p> <p><math>W_{net} = \Delta K</math> or <math>W_{net} = \Delta E_k</math></p>	<p>The net/total work done on an object is equal to the change in the object's kinetic energy OR the work done on an object by a resultant/net force is equal to the change in the object's kinetic energy.</p>
<p><b>Conservative force</b></p>	<p>A force for which the work done in moving an object between two points is independent of the path taken.</p>
<p><b>Non-conservative force</b></p> <p><math>W_{nc} = \Delta K + \Delta U</math> or <math>W_{nc} = \Delta E_k + \Delta E_p</math></p>	<p>A force for which the work done in moving an object between two points depends on the path taken.</p>
<p><b>The principle of conservation of mechanical energy</b></p> <p><math>(E_k + E_p)_{top/A} = (E_k + E_p)_{bottom/B}</math></p>	<p>The total mechanical energy (sum of gravitational potential energy and kinetic energy) in an isolated system remains constant.</p>
<p><b>Power</b></p> <p><math>P = \frac{W}{\Delta t}</math></p>	<p>The rate at which work is done or energy is expended.</p>

- ✚ Work is a form of energy. Work is done by a force F on mass m when the force and the displacement  $\Delta x$  are parallel. In general:  $W = F \Delta x \cos \theta$ , and work is a SCALAR.
- ✚ Isolated system is a system on which no external forces acting on an object (i.e friction)

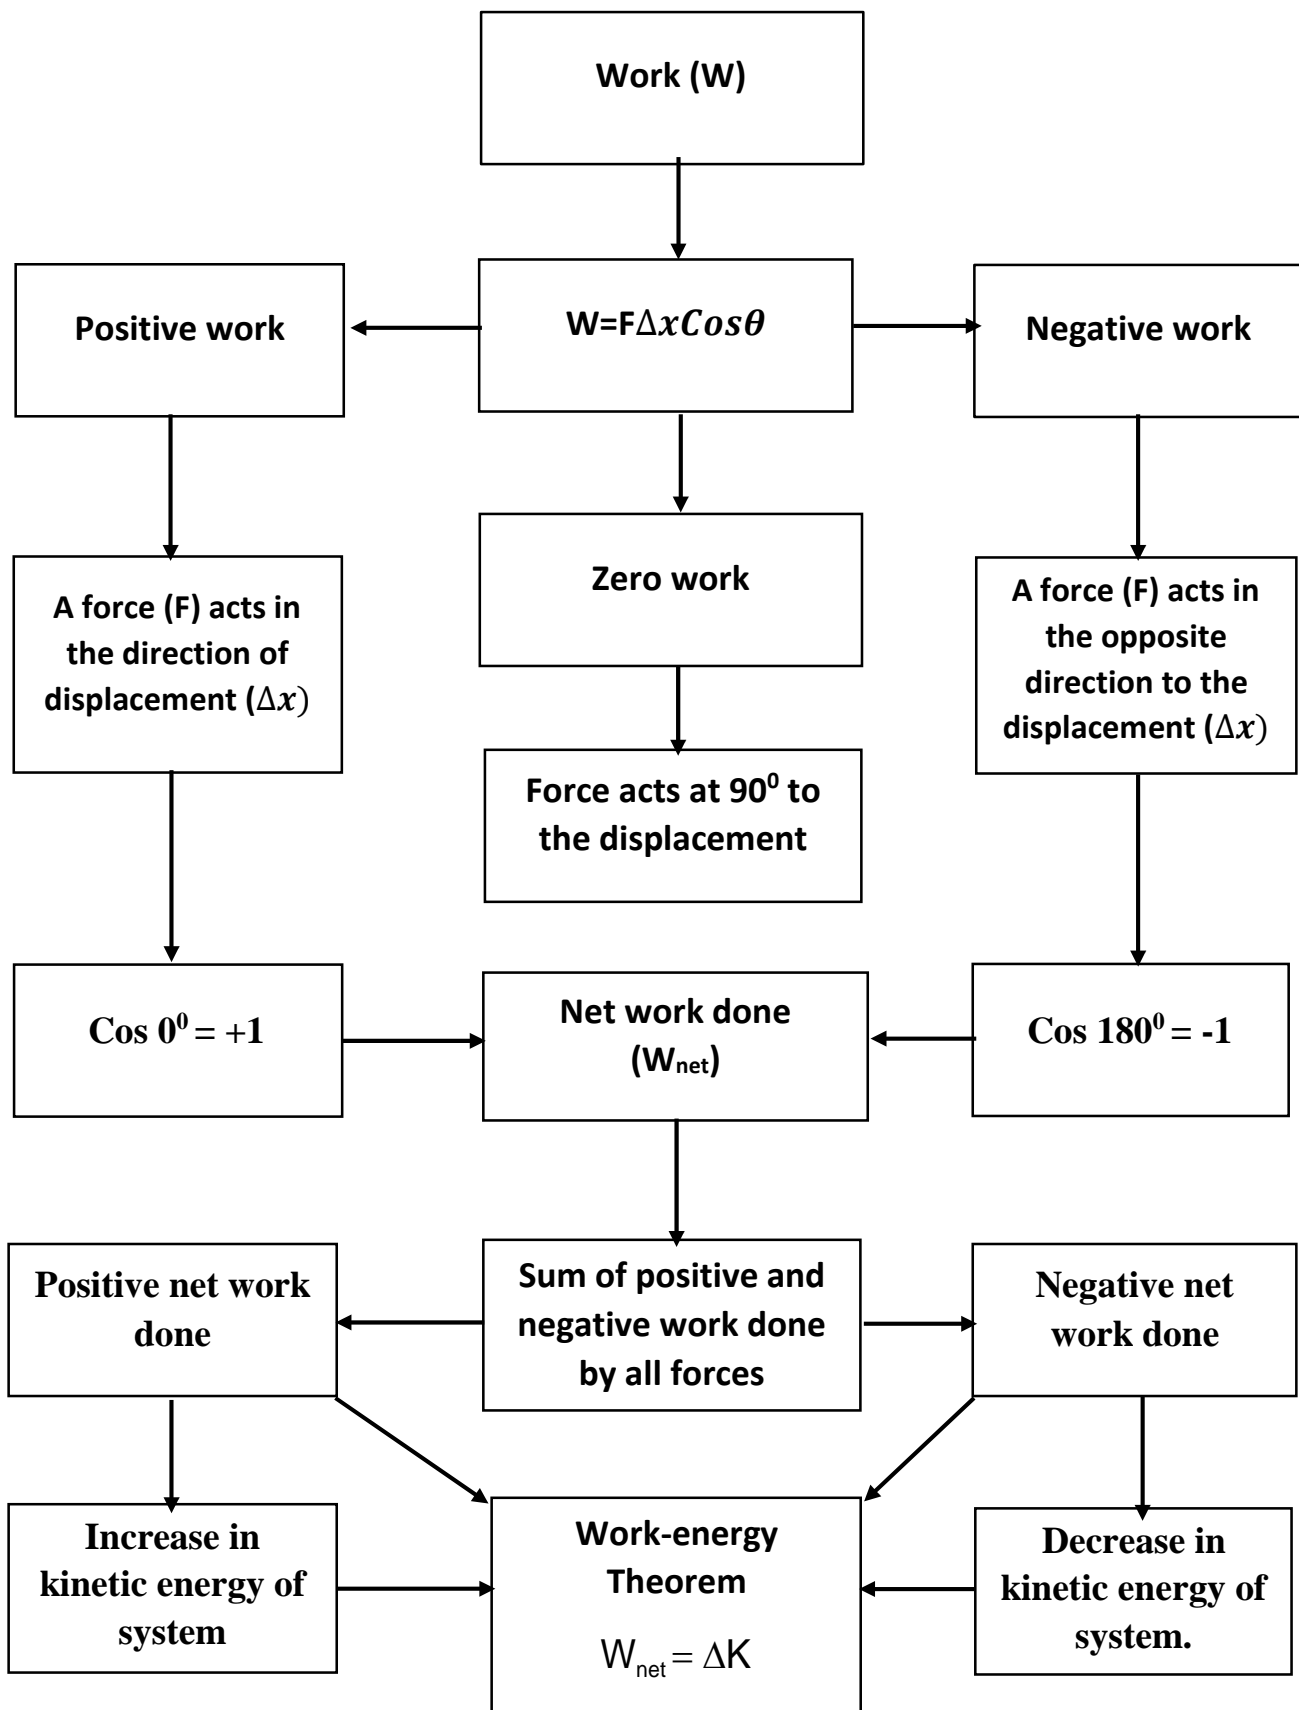

## FORMULAE TABLES:

### FORCE

$F_{net} = ma$	$p = mv$
$f_s^{max} = \mu_s N$	$f_k = \mu_k N$
$F_{net} \Delta t = \Delta p$ $\Delta p = mv_f - mv_i$	$w = mg$
$F = \frac{Gm_1 m_2}{d^2}$	$g = G \frac{M}{d^2}$

### WORK, ENERGY AND POWER

$W = F \Delta x \cos \theta$	$U = mgh$ or/of $E_p = mgh$
$K = \frac{1}{2} mv^2$ or/of $E_k = \frac{1}{2} mv^2$	$W_{net} = \Delta K$ or/of $W_{net} = \Delta E_k$ $\Delta K = K_f - K_i$ or/of $\Delta E_k = E_{kf} - E_{ki}$
$W_{nc} = \Delta K + \Delta U$ or/of $W_{nc} = \Delta E_k + \Delta E_p$	$P = \frac{W}{\Delta t}$
$P_{ave} = Fv_{ave}$	

## LEARNER WORKED ACTIVITIES & EXAMPLES

✚ **Work ( $W$ ) or net work ( $W_{\text{net}}$ ) done can be calculated or applied** by considering an object that moves:

1. **horizontally**
2. **vertically**
3. **at an incline**, under the influence of one or more forces

✚ **Key Concepts:**

1. Work.
2. Free-body diagrams.
3. Work - Energy theorem.
4. Conservative and non-conservative forces.
5. Principle of conservation of mechanical energy
6. Power

### WORKED EXAMPLE 1

A constant force  $F$ , applied at an angle of  $20^\circ$  above the horizontal, pulls a 200 kg block, over a distance of 3 m, on a rough, horizontal floor as shown in the diagram below.

The coefficient of kinetic friction,  $\mu_k$ , between the floor surface and the block is 0,2.

- 1.1 Give a reason why the coefficient of kinetic friction has no units. (1)
- 1.2 State the work-energy theorem in words. (2)
- 1.3 Draw a free-body diagram indicating ALL the forces acting on the block while it is being pulled. (4)
- 1.4 Show that the work done by the kinetic frictional force ( $W_{\text{fk}}$ ) on the block can be written as  $W_{\text{fk}} = (-1\,176 + 0,205 F)$  J. (4)
- 1.5 Calculate the magnitude of the force  $F$  that has to be applied so that the net work done by all forces on the block is zero. (4)

[15]

## SOLUTION

1.1 It is a ratio of two forces ✓ (hence units cancel out). (1)

1.2 The net work done on an object is equal ✓ to the change in kinetic energy of the object ✓ (2)

1.3

1.4  $F \sin 20^\circ + N = mg$  ✓  
 $N = mg - F \sin 20^\circ$  (4)

$$\begin{aligned} W_{fk} &= f_k \Delta x \cos \theta = \mu_k N \Delta x \cos \theta \checkmark \\ &= \mu_k (mg - F \sin 20^\circ) (3) \cos \theta \\ &= \underline{(0,2)[200(9,8) - F \sin 20^\circ] (3) \cos 180^\circ} \checkmark \\ &= (-1176 + 0,205 F) \text{ J} \checkmark \end{aligned} \quad (4)$$

1.5  $W_{\text{net}} = [W_g] + W_f + W_F$  ✓  
 $0 \checkmark = \underline{[0] + [-1176 + 0,205 F] + [F (\cos 20^\circ) (3) (\cos 0)]}$  ✓  
 $F = 388,88 \text{ N} \checkmark$  (4)  
**[15]**

## WORKED EXAMPLE 2

The diagram below shows a boy skateboarding on a ramp which is inclined at  $20^\circ$  to the horizontal. A constant frictional force of 50 N acts on the skateboard as it moves from **P** to **Q**. Consider the boy and the skateboard as a single unit of mass 60 kg.

Ignore the effects of air friction.

2.1 Draw a labelled free-body diagram, showing ALL the forces acting on the boy-skateboard unit while moving down the ramp from **P** to **Q**. (3)

Points **P** and **Q** on the ramp are 25 m apart. The skateboarder passes point **P** at a speed  $v_i$  and passes point **Q** at a speed of  $15 \text{ m} \cdot \text{s}^{-1}$ .

Ignore rotational effects due to the wheels of the skateboard.

- 2.2 State the work-energy theorem in words. (2)
- 2.3 Use energy principles to calculate the speed  $v_i$  of the skateboarder at point **P**. (5)
- 2.4 Calculate the average power dissipated by the skateboarder to overcome friction between **P** and **Q**. (4)
- [14]**

**SOLUTION**

2.1

(3)

- 2.2 The net/total work done on an object equals the change in the object's kinetic energy. ✓✓

2.3 **OPTION 1**

$$W_{\text{net}} = \Delta E_K$$

$$f\Delta x \cos\theta + F_g \Delta x \cos\theta = \frac{1}{2}mv_f^2 - \frac{1}{2}mv_i^2$$

✓ Any one/

$$(50)(25\cos 180^\circ) + (60)(9,8)(25\cos 70^\circ) = \frac{1}{2}(60)(15^2 - v_i^2)$$

$$-1\,250 + 5\,027,696 = 6\,750 - 30v_i^2$$

$$v_i = 9,95(4) \text{ m}\cdot\text{s}^{-1}$$

**OPTION 2**

$$W_{\text{nc}} = \Delta E_K + \Delta E_P$$

$$f\Delta x \cos\theta = \frac{1}{2}(mv_f^2 - mv_i^2) + (mgh_Q - mgh_P)$$

$$E_{\text{mechP}} + E_{\text{mechQ}} + W_{\text{nc}} = 0$$

✓ Any one/Enige een

$$(50)(25\cos 180^\circ) = \frac{1}{2}(60)(15^2 - v_i^2) + (60)(9,8)(-25\sin 20^\circ)$$

$$-1\,250 = 6\,750 - 30v_i^2 - 5\,027,696$$

$$v_i = 9,95 \text{ m}\cdot\text{s}^{-1}$$

(5)

2.4

$$P_{\text{ave/gemid}} = Fv_{\text{ave/gemid}}$$

$$= 50(9,95 + 15)$$

$$= 623,75 \text{ W}$$

(4)  
**[14]**

### WORKED EXAMPLE 3

A load of mass 75 kg is initially at rest on the ground. It is then pulled vertically upwards at a constant acceleration of  $0,65 \text{ m}\cdot\text{s}^{-2}$  by means of a light inextensible rope. Refer to the diagram below. Ignore air resistance, rotational effects and the mass of the rope.

- 3.1 Draw a labelled free-body diagram for the load while it moves upward. (2)
  - 3.2 Name the non-conservative force acting on the load. (1)
  - 3.3 Calculate the work done on the load by the gravitational force when the load has reached a height of 12 m. (3)
  - 3.4 State the work-energy theorem in words. (2)
  - 3.5 Use the work-energy theorem to calculate the speed of the load when it is at a height of 12 m. (5)
- [13]**

3.1 SOLUTION

(2)

3.2 Tension ✓

(1)

3.3  $W = F\Delta x \cos\theta$  ✓ 1 mark for any of these/ 1 punt vir enige van hierdie  
 $W_w = mg\Delta x \cos\theta$   
 $= \underline{75(9,8)(12)\cos 180^\circ}$  ✓  
 $= -8\,820 \text{ J}$  ✓

**OR/OF**

$$W_w = -\Delta E_p \quad \checkmark$$

$$= -(mgh - 0)$$

$$= -(75)(9,8)(12) \quad \checkmark$$

$$= -8\,820 \text{ J} \quad \checkmark$$

(3)

3.4 The work done on an object by a net force is equal to the change in the object's kinetic energy. ✓✓

3.5

1 mark for any of these

$$W_{\text{net}} = \Delta K \quad \checkmark$$

$$F_{\text{net}}\Delta x \cos\theta = \left(\frac{1}{2}mv_f^2 - \frac{1}{2}mv_i^2\right) \quad \checkmark$$

$$\underline{(75)(0,65)(12)} \quad \checkmark \cos 0^\circ \quad \checkmark = \frac{1}{2}(75)(v_f^2 - 0) \quad \checkmark$$

$$v_f = 3,95 \text{ m}\cdot\text{s}^{-1} (3,949 \text{ m}\cdot\text{s}^{-1}) \quad \checkmark$$

(5)  
[13]

### WORKED EXAMPLE 4

A 3 kg trolley is at rest on a horizontal frictionless surface. A constant horizontal force of 10 N is applied to the trolley over a distance of 2,5 m.

When the force is removed at point P, the trolley moves a distance of 10 m up the incline until it reaches the maximum height at point Q. While the trolley moves up the incline, there is a constant frictional force of 2 N acting on it.

- 4.1 Write down the name of a non-conservative force acting on the trolley as it moves up the incline. (1)
  - 4.2 Draw a labelled free-body diagram showing all the forces acting on the trolley as it moves along the horizontal surface. (3)
  - 4.3 State the WORK-ENERGY THEOREM in words. (2)
  - 4.4 Use the work-energy theorem to calculate the speed of the trolley when it reaches point P. (4)
  - 4.5 Calculate the height,  $h$ , that the trolley reaches at point Q. (5)
- [15]**

### SOLUTION

- 4.1 Frictional force ✓ (1)

- 4.3 The net work done ✓ on an object is equal to the change in kinetic energy ✓ of the object. (2)

4.4

$$W_{\text{net}} = \Delta E_K \quad \checkmark$$

$$W_F + W_w + W_{FN} = \frac{1}{2} m(v_f^2 - v_i^2)$$

$$(10)(2,5)\cos 0^\circ + 0 + 0 \quad \checkmark = \frac{1}{2} (3)(v_f^2 - 0^2) \quad \checkmark$$

$$v_f = 4,08 \text{ m}\cdot\text{s}^{-1} \quad \checkmark$$

(4)

4.5

**OPTION 1**

$$W_{nc} = \Delta E_p + \Delta E_k \checkmark$$

$$f\Delta x \cos\theta = (mgh_f - mgh_i) + (\frac{1}{2}mv_f^2 - \frac{1}{2}mv_i^2)$$

$$(2)(10)\cos 180^\circ \checkmark = (3)(9,8)h_f - 0 \checkmark + 0 - \frac{1}{2}(3)(4,08)^2 \checkmark$$

$$\therefore h = 0,17 \text{ m } \checkmark$$

**OPTION 2**

$$W_{net} = \Delta E_k \checkmark$$

$$mgsin\alpha \Delta x \cos\theta + f\Delta x \cos\theta = \frac{1}{2}m(v_f^2 - v_i^2)$$

$$(3)(9,8)\left(\frac{h}{10}\right)(10)\cos 180^\circ \checkmark + (2)(10)\cos 180^\circ \checkmark = \frac{1}{2}(3)(0^2 - 4,08^2) \checkmark$$

$$\therefore h = 0,17 \text{ m } \checkmark$$

(5)  
[15]

### WORKED EXAMPLE 5

- 5.1 The diagram below shows a track, **ABC**. The curved section, **AB**, is frictionless. The rough horizontal section, **BC**, is 8 m long.

An object of mass 10 kg is released from point **A** which is 4 m above the ground. It slides down the track and comes to rest at point **C**.

- 5.1.1 State the *principle of conservation of mechanical energy* in words. (2)
- 5.1.2 Is mechanical energy conserved as the object slides from **A** to **C**?  
Write only YES or NO. (1)
- 5.1.3 Using ENERGY PRINCIPLES only, calculate the magnitude of the frictional force exerted on the object as it moves along **BC**. (6)

[9]

### SOLUTION

- 5.1.1 In an isolated/closed system, ✓ the total mechanical energy is conserved / remains constant ✓ (2)
- 5.1.2 No ✓ (1)

## 5.1.3

<b>OPTION 1</b>	<b>OPTION 2</b>
<p>Along <b>AB</b></p> $E_{\text{mechanical at A}} = E_{\text{mechanical at B}}$ $(E_p + E_k)_A = (E_p + E_k)_B$ $(mgh + \frac{1}{2}mv^2)_A = (mgh + \frac{1}{2}mv^2)_B$ $(10)(9,8)(4) + 0 = 0 + \frac{1}{2}(10)v_f^2$ $v_f = 8,85 \text{ m}\cdot\text{s}^{-1}$	<p>Along <b>AB</b></p> $W_{\text{net}} = \Delta E_k$ $F_g \Delta h \cos \theta = \frac{1}{2}m(v_f^2 - v_i^2)$ $(10)(9,8)(4)\cos 0^\circ = \frac{1}{2}(10)(v_f^2 - 0)$ $v_f = 8,85 \text{ m}\cdot\text{s}^{-1}$
<p>Along <b>BC/Langs BC</b></p> $W_{\text{net}} = \Delta K$ $f \Delta x \cos \theta = \Delta K$ $\frac{f(8)\cos 180^\circ}{f} = \frac{\frac{1}{2}(10)(0 - 8,85^2)}{4}$ $f = 48,95 \text{ N}$	<p>Along <b>BC/Langs BC</b></p> $W_{\text{nc}} = \Delta K + \Delta U$ $f \Delta x \cos \theta = \Delta K + \Delta U$ $\frac{f(8)\cos 180^\circ}{f} = \frac{\frac{1}{2}(10)(0 - 8,85^2) + 0}{4}$ $f = 48,95 \text{ N}$ (Accept/ Aanvaar 49 N)

(6)

[9]

**KEY POINTS TO NOTE**✓ **Drawing free body diagrams****Avoid doing the following:**

- Drawing a force diagram instead of a free-body diagram.
- Drawing a free-body diagram for an object on an incline, when the object is on a horizontal surface and vice versa
- Resolving a force (the weight of an object on an incline, and a force acting at an angle) into its components and then including the force and the components in one diagram.
- Including a frictional force when friction should be ignored or omitting the frictional force when there is friction.
- Incorrect representation of the normal force when the object is on an inclined plane.
- Incorrect labelling of forces, and drawing straight lines without arrow-heads.

✓ **Calculations/Problem solving**

- Identify the correct initial and final velocities and do not swap these two velocities
- Understand the meaning of  $F$  &  $F_{\text{net}}$  and  $W$  &  $W_{\text{net}}$ .  $F_{\text{net}}$  is the sum of all the forces acting on an object.  $W_{\text{net}}$  is the sum of the work done by all the forces.  $F$  is a single force acting on an object, while  $W$  is work done by ONE force.
- Do not leave out the subscripts in the formulae, i.e  $F$  or  $W$  instead of  $F_{\text{net}}$  or  $W_{\text{net}}$ .
- Do not include a frictional force where friction should be ignored or leave out the frictional force where there is no friction.
- Remember that friction always acts in the opposite to the motion of an object.
- Make sure you understand the concept of negative work. Note that an object can be moving whilst a force is acting in the opposite direction and this force may not necessarily be frictional force.
- When a force does negative work on an object, energy is removed from the object and converted to other forms of energy such as heat. (The object becomes warmer)
