NEW TECHNOLOGY SCHOOLS SHOULD TAKE NOTE AND MANAGE

ChatGPT

This is an App, a so-called Chatbot (communication robot) that was launched in November 2022 and has since taken the world by storm. This has major implications for education and therefore it is important that we manage the challenges properly: Utilize the good qualities and limit the negative influences.

It uses Artificial Intelligence and can complete a variety of tasks in an instant, for example essays, speeches, poems, music, plays, tutor students by defining terms and explaining difficult concepts, solve math problems, identify scholarly debates on a particular topic and explore subjects through differing theoretical lenses, model clearly organized descriptive and argumentative writing on particular topics, etc. The possibilities are limitless.

Please read more about this and prepare yourself.

- **Background:** <https://en.wikipedia.org/wiki/ChatGPT>
- **Unleashing the power of ChatGPT in education:** <https://nexus-education.com/blog/unleashing-the-power-of-chat-gpt-in-education/#>

Smartwatches

The development of these smart watches really takes one's breath away, because the gap between these watches and smartphones is getting smaller and smaller. The most advanced watches have almost the same functionality as smartphones and therefore, as in the case of smartphones, schools should also develop a policy on this and manage the challenges.

Smartphones have many uses that are useful for education - inside the classroom and at home. Teachers should provide the necessary guidance in this regard. However, since mobile phones can also be misused in numerous ways, learners should be educated in this regard and there should be a policy as mentioned above.
